SULZBERG SPORTS MEDIA + FINE ART

INTEGRATED ART SYSTEMS

Adding depth and prestige to Sulzberg Sports Media and Fine Art is our product line called Integrated Art Systems. This is Bruce Sulzberg's concept where he took his style and technique and instead of traditionally framing the end result, he took it one step further and figured out a way to build these 3-dimensional paintings inside a wall. This product line takes the company into a whole new arena that most art companies do not have. It mixes the art world with the interior design world and is so unique we are the only company in the world with this concept.

The INTEGRATED ART SYSTEM LINE is the production of our original 3-dimensional layered paintings built-in to a special containment system referred to as "the shell" and installed inside the wall. The shell that is built around the art is made out of wood and painted inside and out to match the wall that it is being built. The shell is one piece that then slides into the custom sized space that has been carved out. The final part of the installation is building the wall around the painting to showcase the Original painting.

The ISA SYSTEM is also removable if the clients ever decided to move to a new location.
